“FRIOLINA® PLANTS HAVE A SUPERIOR AND INNOVATIVE TRAILING HABIT, WITH A CONTINUOUS AND BEAUTIFUL SHOW OF FLOWERS DURING THE SPRING AND AGAIN IN THE AUTUMN”

The well known Colourwave® collection of flowering perennials, including SUN PARASOL®, MILLION BELLS®, SURFINIA®, SENETTI® and many more.....introduces FRIOLINA®

Friolina® plants are members of the Violaceae family and are a native of the Pyrenees. After growing Friolina® you will notice that the plants are unlike other viola in their habit and toughness; they're very tolerant of both hot and cold conditions, making them suitable for autumn and spring gardens. Friolina® plants are highly branched, which is how Friolina® can produce so many flowers all over the plant. Plants can be grown as a biennial, but are commonly grown as an annual. Friolina® has a vigorous trailing habit, making them ideal for hanging baskets, ground covering and patio containers.

Friolina® plants are very cold and heat tolerant, and will tolerate temperatures down to minus 15°C! Flowers are plentiful and will cover the entire plant. The flowers are also self cleaning. Plants will reach a height of 150-200mm, and will spread 300-350mm wide. Flowering Friolina® plants are available from May to October, and are propagated by cuttings.
